The motion of the bullet can be modelled using the equation $y = -2x^2 + 7x + 15$, where x is the distance, in m and y is the height, in m. If the distance of the bullet more than 4 m, the student will be representing his sport house.

Determine either the student will be representing his sport house or not. Justify your answer.

Pergerakan peluru tersebut boleh dimodelkan menggunakan persamaan $y = -2x^2 + 7x + 15$, di mana x adalah jarak, dalam m dan y ialah tinggi, dalam m. Sekiranya jarak lontaran peluru tersebut melebihi 4 m, murid tersebut akan mewakili rumah sukannya.

Tentukan sama ada murid itu akan mewakili rumah sukannya atau tidak. Jelaskan jawapan anda.

- (b) Another solid right prism with uniform cross-section of a right angled triangle is removed from the prism in Diagram 12.1. The remaining solid is shown in Diagram 12.2. Rectangle $ABKL$ is an inclined plane.

Sebuah pepejal lain berbentuk prisma dengan keratan rentas segi tiga bersudut tegak dikeluarkan daripada prisma dalam Rajah 12.1. Pepejal yang tinggal adalah seperti ditunjukkan dalam Rajah 12.2. Segi empat tepat $ABKL$ ialah satah condong.

Draw to full scale,
Lukiskan dengan skala penuh,

- (i) the elevation of the combined solid on a vertical plane parallel to AB as viewed from X .
dongakan gabungan pepejal itu pada satah mencancang yang selari dengan AB sebagaimana dilihat dari X .

- 16 A passenger aeroplane fly from A (60° N , 50° E) due east to B (60° N , 120° E). After flying $\frac{2}{3}$ of the way, the aeroplane sustained breakdown and landed at C . Another aeroplane is flying from D (20° N , 80° E) due north to P that located at the parallel of latitude 60° N . The aeroplane continued its journey along the parallel of latitude to C to pick up the stranded passengers.

Sebuah kapal terbang penumpang terbang dari A (60° U , 50° T) arah timur ke B (60° U , 120° T). Setelah terbang $\frac{2}{3}$ dari perjalanannya, kapal terbang tersebut mengalami kerosakan dan mendarat di C .

Sebuah kapal terbang lain terbang dari D (20° U , 80° T) arah utara ke P yang berada pada selarian latitud 60° U . Kapal terbang ini meneruskan perjalanan sepanjang selarian latitud itu ke C untuk mengambil penumpang yang terkandas.

- (a) State the latitude of C . [1 mark]
Nyatakan latitud C . [1 markah]
- (b) Calculate the distance, in nautical mile, from D to P . [2 marks]
Hitung jarak, dalam batu nautika, dari D ke P . [2 markah]
- (c) Calculate the position of C . [5 marks]
Hitungkan kedudukan C . [5 markah]
- (d) Calculate the total time, in hours, taken by the aeroplane that flew from D to C to pick up the stranded passengers. Given that the average speed of the flight is 420 knots. [4 marks]

Hitung jumlah masa, dalam jam, perjalanan kapal terbang dari D ke C untuk mengambil penumpang yang terkandas. Diberi purata laju penerbangan kapal terbang tersebut ialah 420 knot.
